

### Powerful but Gentle Biodegradable Cleaner

#### Product Information

---

PM 1001 Truck Wash is a high foaming biodegradable detergent suitable for cleaning all on and off road vehicles and equipment. It can be used through a variety of pressure and foaming equipment.

PM Truck Wash contains a unique mixture of powerful surfactants, alcohols, aromatic chemicals and water softeners. PM 1001 contains no masking agents. The formulation is designed to remove all greases and oils and road grime with little manual effort from the operator. Machinery can be degreased and cleaned more efficiently as the Wash is supplied in a ready to use liquid with no additional preparation necessary.

Many of the wash compositions available on the market today depend on the reaction of extremely hazardous chemicals, for example white spirit, kerosene or hydrocarbons to achieve the cleaning. These products are not present in PM Truck Wash.

---

#### Application and Directions for use

PM1001 is a ready to use solution.

##### *Direct Application :*

Spray directly onto the machine or vehicle,(preferably in the shade) through a degreasing/foam generating gun or hose.

##### *Indirect Application :*

Apply the solution through a discharge outlet on a pressure cleaner. (A 1:10 mix ratio is recommended). Allow to stand for 5-8 minutes before washing off with a hose or pressure cleaner.

#### Conformity

PM 1001 Truck Wash conforms to the Australian Governments biodegradability regulations and presents no pollution hazard should it be accidentally spilt.

#### Available in 20L and 5L Containers
