

PM204

Power On 4T
Semi Synthetic Motorcycle
10W40
API: SP JASO: MA-2

Stay in the Power Stay in the Ride

Product Information

PM204 Power On 4T 10W40 is a premium-quality, part-synthetic motorcycle engine oil that has been developed to meet the requirements of 4-stroke motorcycle engines. Coupled with these developments are performance improvements bikers are seeking for open-air riding. PM204 Power On has been designed to maximise performance for motorcycle engines and deliver a new level of dynamics and reliability riders will cherish.

PM204 Power On 4T 10W40 delivers high-temperature performance through the careful selection of thermally stable base oils and high-quality, advanced-technology additives. Peak engine performance, especially in sustained high-speed operation, is a luxury because the risk of high-temperature deposits and lacquer from oxidation and nitration increases with a lean-burn setting. PM204 Power On 10W40 experiences less oxidation, resulting in enhanced protection compared to conventional engine oils. Exhaust catalyst protection on the latest models is also covered with this product.

PM204 Power On 4T 10W40 is suitable for all 4-stroke motorcycles, both carburettor and fuel-injection-equipped, and meets and exceeds the API Service Classification SN & JASO MA-2. Friction is optimised, allowing faster acceleration.

PM204 Power On 4T 10W40 is suitable for all 4 stroke motorcycles, both carburettor and fuel injection equipped and meets and exceeds the API Service Classification SP & JASO MA-2. Friction is optimised, allowing for faster acceleration. Both wet and dry clutch systems are supported and meet the physical, chemical, and frictional requirements of the JASO MA-2 standard. Superior protection where lower ambient start-up temperatures are encountered.

Typical Properties

SAE Viscosity	10W40
Kinematic Viscosity	
Viscosity @ 40°C	107 cSt
Viscosity @ 100°C	14 cSt
Pour Point °C	-24 °C
Flash Point °C	TBA
Viscosity Index	131
Density @ 15° C kg/L	0.852

Benefits

- Improves Power
- Superior Combustion
- Friction Optimised
- Superior Acceleration
- Lower Wear Rates
- Piston Scuffing Eliminated
- Increased Reliability

Available in 20L, 5L Containers

Issued January 2026

Meets and or Exceeds Service Classifications

- API: SP
- JASO: MA-2

PM204 Power On 4T 10W40

High Performance and Low Wear

Why PM Lubrication?

- ❖ Premium Quality
- ❖ XPR Protection Reserve
- ❖ Cost Effective Lubrication
- ❖ On-Site Monitoring will maximise equipment life
- ❖ Knife Edge Filtration
- ❖ Our Predictive & Preventative Maintenance Programme is GUARANTEED to save 15% of your total operating costs
